

SEARCH REQUEST FORM

5-54

Requestor's Name: _____ Serial Number: _____

Date: _____ Phone: _____ Art Unit: _____

Search Topic:

Please write a detailed statement of search topic. Describe specifically as possible the subject matter to be searched. Define any terms that may have a special meaning. Give examples or relevant citations, authors, keywords, etc., if known. For sequences, please attach a copy of the sequence. You may include a copy of the broadest and/or most relevant claim(s).

MPsrch_pp protein - protein database search, using Smith-Waterman algorithm

Run On: Wed May 6 08:18:28 1998; Maspar time 3.90 Seconds

Tabular output not generated. 375.094 Million cell updates/sec

Title: >US-08-804-166-2

Description: (1-256) from US0804166.pep

Sequence: 1 SRTSLAFGLLCIPWQEG.....GFKVNTGCHGCTCYTHKS 256

Scoring table: PAM 150

Gap 11

Searched: 62627 segs, 5720858 residues

Post-processing: Minimum Match 08

Listing first 45 summaries

Database:

a-issued
1:back1 2:51 3:52 4:53 5:54 6:55 7:56 8:57 9:PCT90
10:PC191 11:PCT92 12:PCT93 13:PC194 14:PCT95 15:PCT96

Statistics: Mean 29.680; Variance 124.309; scale 0.239

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Mparch_pp protein - protein database search, using Smith-Waterman algorithm
Run on: Wed May 6 08:27:00 1998; MasPar time 4.88 seconds
Tabular output not generated. 394.142 Million cell updates/sec

Title: >US-08-804-166-8
Description: (1-336) from US08804166.pap
Perfect Score: 2541
Sequence: 1 SRTSLLAFLGLCLPWLQEG.....PSLSPSRKLPSPDPTLPQ 336

Scoring table: PAM 150
Gap 11

Searched: 62627 seqs, 5720858 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: a-issued
1:back1 2:51 3:52 4:53 5:54 6:55 7:56 8:57 9:PC190
10:PC191 11:PC192 12:PC193 13:PC194 14:PC195 15:PC196

Statistics: Mean 30.838; Variance 140.153; scale 0.220

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

MPearch_n n.a. - n.a. database search, using Smith-Waterman algorithm

Run on: Wed May 6 11:17:48 1998; Maspar time 73.35 Seconds

Tabular output not generated. 934.882 Million cell updates/sec

Title: >US-08-804-166-7

Description: (1-1301) from US08804166.seq

Perfect Score: 1301 1 CTCGAGATCGCTACAGTAA.....CACATATAGGATCCCTCGAG 1301

N.A. Sequence: Comp: GAGCTGTACCGATGTCATT.....GTGTATCTCTAGGAGCTC

Scoring table: TABLE default

Gap 6

Nmatch STD : Dbase 0; Query 0

Searched: 102136 segs, 26354296 bases x 2

Post-processing: Minimum Match 0%

Database: n-tssued 1:back1 2:51 3:52 4:53 5:54 6:55 7:56 8:57 9:PCIT90

Statistics: Mean 8.845; Variance 4.678; scale 1.891

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 30.064; Variance 126.027; scale 0.239

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Statistics: Mean 30.606; Variance 140.802; scale 0.217

Pred. No. is the number of results predicted by chance to have a
 score greater than or equal to the score of the result being printed,
 and is derived by analysis of the total score distribution.

CC Sequence 9, Application US/08425673
CC Patent No. 5508261
CC GENERAL INFORMATION:
CC APPLICANT: Moyle, William R.
CC APPLICANT: Campbell, Robert K.
CC TITLE OF INVENTION: Analogs of glycoprotein Hormones Having
CC TITLE OF INVENTION: Altered Receptor Binding Specificity and Activity and
CC TITLE OF INVENTION: Methods for Preparing and Using Same
CC NUMBER OF SEQUENCES: 12
CC CORRESPONDENCE ADDRESS:
CC ADDRESSEE: Richard R. Muccino
CC STREET: P.O. Box 1267
CC CITY: Princeton
CC STATE: New Jersey
CC COUNTRY: USA

Listing first 45 summaries

Database:

n-issued
1:back1 2:51 3:52 4:53 5:54 6:55 7:56 8:57 9:PC190
10:PC191 11:PC192 12:PC193 13:PC194 14:PC195 15:PC196

Statistics: Mean 8.771; Variance 4.649; scale 1.887

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Statistics: Mean 9.090; Variance 5.026; scale 1.809

Prod. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT	New polypeptide capable of binding human TNF alpha - comprises
PT	first three cysteine-rich subdomains of TNF alpha receptor for
PT	treating autoimmune disease, septic shock, HIV etc.
PS	Example: Fig 7; 43pp; English.
CC	This sequence encodes the designed TNF-alpha 55kD receptor
CC	derivative, as present in pTNFrec. This was produced as described in
CC	Q24441. This derivative lacks the 81 carboxyl terminal residues of
CC	the cytoplasmic domain. The derivative could be used in the
CC	regulation of TNF-alpha mediated responses by binding and
CC	sequestering human TNF-alpha e.g. in the treatment of pulmonary
CC	diseases, septic shock, HIV infection, malaria, viral meningitis,
CC	graft versus host disease and autoimmune diseases, esp. Rheumatoid
CC	arthritis.

PT DNA encoding TNF binding protein and TNF-receptor - used in
PT tumour treatment and to understand mechanisms to TNF action
PS Disclosure; Fig 1(1-3); Sipp; German.
CC pTNF-BP15 is one of 30 positives clones in a screened cDNA library
CC from induced TNF-induced fibrosarcoma cells. A TNF-BP had been
CC isolated from the urine of patients with uraemia and probes/primers
CC were constructed from the determined amino acid sequence.
CC to produce a vector expressing a soluble form of TNF-binding
CC protein, this plasmid was cut with XmnI, amplified by PCR and the
CC amplified DNA cut with BamHI and EcoRI.
CC (BRL) cut with the same enzymes to recover pTNF-BP. This was cut
CC with BamHI and EcoRI, and the recovered fragment inserted into
CC pMD-MV1 (006282) to give the required plasmid pMDTNF-BP.
CC See also 006282-006285.

PT New fusion protein tumour necrosis factor and human interleukin-1
PT receptor - useful in therapy, diagnosis and assays of e.g.
PT rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.
PS Disclosure; Page 57-59; 85pp; English.
CC The sequences given in Q49931-32 encode human tumour necrosis factor
CC receptor (TNF-R) and the sequences in Q49933-34 encode human
CC interleukin-1 receptor (IL-1R). These sequences were used in the
CC production of a fusion protein which conformed to one of the
CC formulae:
TNF-R-linker-TNF-R-linker-IL-1R

```

IL-1R-linker-TNF-R-linker-TNF-R or
 CC TNF-R-linker-TNF-R
 CC The linker may comprise 5-100 amino acids selected from Gly, Asp,
 CC Ser, Thr and Ala. These linkers separate the individual moieties
 CC by such a distance that each component of the fusion protein is
 CC capable of folding into the secondary or tertiary structure required
 CC for its biological activity. These fusion proteins may be used in
 CC therapy, diagnosis and assays for conditions mediated by TNF or IL-1,
 CC particularly in conditions in which both TNF and IL-1 play a causative
 CC role. They may be used to treat cachexia, rheumatoid arthritis,
 CC diabetes, multiple sclerosis, pulmonary fibrosis and silitosis,
 CC cerebral malaria, allograft and xenograft rejection in graft verses
 CC host disease, sepsis, septic shock, inflammation, allergies and
 CC autoimmune dysfunctions.

 PT New polypeptide capable of binding human TNF alpha - comprises
 PT first three cysteine-rich subdomains of TNF alpha receptor for
 PT treating autoimmune disease, septic shock, HIV etc.
 PS Claim 4; Fig 1; 43pp; English.
 CC This sequence encodes human TNF-alpha 55KD receptor. A placenta cDNA
 CC library in g10 was screened with probe Q29236. Ten hybridising clones
 CC were plaque purified and cDNA size determined by PAGE against an
 CC Eco RI digested phage DNA. The inserts of two cDNA clones were then
 CC sequenced. The coding region of the majority of the human TNF-alpha
 CC 55KD receptor was isolated as an EcoRI fragment encoding 374 amino
 CC acids, and cloned into a mammalian cell expression vector, resulting
 CC in pTNFR. A derivative of the TNF-alpha receptor was produced by
 CC engineering a termination codon just prior to the transmembrane
 CC domain. PCR with primers Q29237,8 generated a 300bp
 CC restriction fragment which was cloned into pTNFR, giving pTNFRcd.
 CC DNA sequencing confirmed this contained the designed DNA sequence.
 CC The TNF-alpha receptor expression plasmids were then transfected
 CC into monkey COS-7 cells.

PT Insoluble tumour necrosis factor binding proteins - and DNA

PT encoding them, useful in pharmaceutical prods. and for antibody

PT prodn.

PS Claim 4: Fig 1: 26pp; German.

CC Partial amino acid sequences were determined for the 55 and 75kD

CC TNF-BPs (see R11072-R11081) and oligonucleotide primers were

CC synthesized based on these partial sequences. The primers were used

CC to produce a cDNA fragment for use as a probe to screen a human

CC placental cDNA bank constructed in lambda gill. Positive clones were

CC identified and sequenced. DNA constructs comprising the TNF-BP coding

CC sequence may also contain a fragment encoding a human Ig domain.

CC Recombinant constructs are used to transform cells to confer

CC improved TNF-binding properties.

CC See also Q10956.

PT Modulating activity of tumour necrosis factor receptor - using
PT peptides), antibodies, etc. which interact with critical regions
PT of receptor or effector protein, for controlling auto-immune
PT disease, septic shock, etc.
PS Claim 2; Figure 1; 17pp; English.
CC Modification of the tumour necrosis factor receptor by mutation or
CC deletion modulates signal transduction and/or cleavage effected by
CC the receptor. This modulation of activity can also be achieved by
CC using effector proteins which interact with the TNF receptor.
CC Molecules which interact with the TNF receptor or the effector
CC proteins can be used to treat or prevent diseases associated with
CC TNF activity e.g. autoimmune disease; rheumatoid arthritis; graft
CC rejection; graft vs. host disease or septic shock. They can also
CC be used to treat overdoes of exogenous TNF.

PT Recombinant tumour necrosis factor binding protein I - prep'd. by
PT transfecting eukaryotic cells with vector contg. deoxyribonucleic
PT acid encoding human type I TNF receptor or soluble domain
PS Disclosure: Fig 1(D): 10pp; English.
CC The Tumour Necrosis Factor Binding Protein I is the soluble form of
CC type I TNF-receptor and constitutes a fragment of the cell surface
CC form of this receptor, corresp. to its extracellular domain.
CC There is no characteristic poly(A) addition signal near the 3' end
CC of the cDNA. The sequence ACCTMA (tag m) may serve as an
CC alternative to this signal, but with low efficiency.
CC See also 012212-15.

PT New polypeptide capable of binding human TNF alpha - comprises
PT first three cysteine-rich subdomains of TNF alpha receptor for
PT treating autoimmune disease, septic shock, HIV etc.

PS Example: Fig 11: 43pp; English.
CC This sequence encodes the designed TNF-alpha 55kd receptor
CC derivative, as present in pdelatv. This construct was generated by
CC cloning of the BglII/HindIII digested product of a PCR using
CC primers 5A and 4D into BglII/HindIII 5'-delta-tac. This introduced
CC a termination codon after amino acid 167, to yield pdelatv.
CC This derivative lacks the membrane proximal 4th subdomain, yet
CC retains the ability to bind TNF-alpha with high affinity
CC (10power8 - 10power9 Mpower-1) The deriv. can be used in the
CC regulation of TNF-alpha mediated responses by binding and
CC sequestering human TNF-alpha e.g. in the treatment of pulmonary
CC diseases, septic shock, HIV infection, malaria, viral meningitis,
CC graft versus host disease and autoimmune diseases, sep. Rheumatoid
CC arthritis. The deriv. is given at 10-100ug/dose.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

DR N-PSDB; T94007.
DR Hydr dimeric protein comprising two co-expressed units - each
PT based on receptor or ligand and a subunit of a heterodimeric
PT hormone, especially FSH, for inducing follicular maturation
PS Example: Pages 32-33; 60pp; English.
CC A novel fusion protein comprises 2 dimer forming co-expressed amino
CC acid sequences, each consisting of a homodimeric or heterodimeric
CC receptor chain or ligand, with ligand-receptor binding activity,
CC bound directly or via a peptide linker to a subunit of a
CC heterodimeric protein hormone capable of forming a heterodimer with
CC the hormone's other subunits. The fusion protein, e.g. the
CC thrombopoietin (TPO)/human chorionic gonadotropin-alpha subunit
CC (hCG-alpha) fusion protein denoted by the present sequence,
CC significantly increases the biological activity of the hormone
CC component, reducing the requirement for hormone itself and the
CC number of injections needed.
SQ Sequence 256 AA.

CC A novel fusion protein comprises 2 dimer forming co-expressed amino acid sequences, each consisting of a homodimeric or heterodimeric receptor chain or ligand, with ligand-receptor binding activity, bound directly or via a peptide linker to a subunit of a heterodimeric protein hormone capable of forming a heterodimer with the hormone's other subunits. The fusion protein, e.g. the thrombopoietin (TPO)/human chorionic gonadotrophin-alpha subunit (hCG-alpha) fusion protein denoted by the present sequence, significantly increases the biological activity of the hormone component, reducing the requirement for hormone itself and the number of injections needed.

PT New ethylene glycolated polypeptide(s) with improved
PT pharmacokinetic properties - for treating e.g. TNF and IL-1
PT mediated diseases, e.g. adult respiratory distress syndrome,
PT rheumatoid arthritis, septic shock etc.
PS Claim 54; Fig 2; 100pp; English.
CC The sequence shows a native 30 kD TNF inhibitor which may be
CC modified to contain at least one non-native cysteine residue, pref.
CC at positions 1, 14, 105, 111 and/or 165. The non-native cysteine is
CC joined to a non-peptidic polymer, pref. monomethoxy PEG via
CC thio-ether bonds. Two such TNF inhibitor mols. may be linked via
CC this non-peptidic spacer. The modified polypeptides show improved
CC pharmacokinetic properties, i.e. increased mol. wt. hence reduced
CC clearance rate following s.c. or systemic administration. Increased
CC sol. of native TNF inhibitors, and reduced antigenicity. The
CC polypeptides may be used for treatment of TNF mediated diseases such
CC as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid
CC arthritis, inflammatory bowel disease and septic shock. The same
CC method may be applied to the interleukin-1 receptor antagonist
CC IL-1ra.

PT New hybrid peptide(s) for binding cytokine(s) - comprising a
PT malaria parasite peptide capable of binding a red blood cell and
PT a receptor peptide
PS Example A, Page 54-55; 93pp: English.
CC Hybrid peptides for binding cytokines, comprising a malaria parasite
CC (Plasmodium falciparum) peptide (capable of binding to a red blood
CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
CC of these hybrid peptides. R70108 is a fusion of tumour necrosis factor
CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)
CC and glycophorin binding protein (GBP) homologue (GBPH). The
CC use of cytokine receptors not normally found on RBCs means that the
CC cytokine can bind harmlessly to the RBC without deleterious effect.
CC The RBC protects the hybrid peptides from excretion from the kidney, and
CC due to steric hindrance prevents the cytokines binding to a receptor in
CC another cell. GBP 130 or GBPH are the pref. malaria parasite peptides
CC used, others include EBA 175 (175 kDa erythrocyte binding antigen), PMMSA
CC (pre major merozoite surface antigen) and the Duffy binding receptor
CC molecule (eg. exhibited by Plasmodium vivax). These peptides bind to
CC pref. glycophorin A, B and C, sialo glycoproteins, found on the surface
CC of RBCs. The hybrid peptides are thus used to lower the levels of free
CC cytokines in the circulation to reduce pathological damage.

 PT New protease capable of cleaving soluble tumour necrosis factor
 PT (TNF) receptor - from cell-bound TNF-receptor, useful for
 PT antagonising deleterious effects of TNF.
 PS Disclosure: Fig 1; 40pp; English.
 CC This sequence represents human p55 tumour necrosis factor (TNF-R).
 CC Expression of this receptor is regulated by shedding of the extracellular
 CC receptor fragment. The p55 TNF-R can be shed in response to different
 CC inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell
 CC type. The only region of the receptor whose structure affects the
 CC shedding response is the spacer region (see R75012) in the extracellular
 CC domain. This region is located close to a site of cleavage of the
 CC molecule, and links the Cys rich module to the transmembrane domain. The
 CC spacer region of the encoded protein was used to create the chimeras
 CC between human p55 TNF-R and murine epidermal growth factor receptor
 CC (EGF-R) that are represented by R75007-11. This spacer region was
 CC subjected to deletion mutations (R75013-25) and substitutions
 CC (R75026-47). Of the spacer region, the most important residues are
 CC Asn 172, Val 173, Lys 174 and Gly 175, with Val 173 being the most
 CC important of these. The shedding of the receptor is independent of the
 CC side chain identity of these residues, with the exception of a limited
 CC dependence on the identity of Val 173. Mutations which alter the
 CC conformation of the protein adversely affect the shedding process.
 CC The mutations shown in R75013-47 were introduced in order to create an
 CC inhibitor of a protease that is capable of cleaving the soluble TNF-R
 CC from the cell bound TNF-R. Fragments of these inhibitors can be seen in
 CC R75017-9, R75025, R75033-5 and R75042-3. These protease inhibitors can
 CC be used for enhancing TNF function.

 PT DNA encoding TNF binding protein and TNF-receptor - used in
 PT tumour treatment and to understand mechanism to TNF action
 PS disclosure; Fig 91(1-2); 51pp; German.
 CC ratTNF-88 (006284) was used to screen the HS913T cDNA library.
 CC LambdaTNF-R2 encodes the complete human TNF-R2 and was used to
 CC construct a plasmid (pADTNF-R) expressing the product the same way
 CC as pADTNF-BP (see 006282). The expressed proteins are useful
 CC prophylactically and therapeutically to control disorders which
 CC involve the damaging effects of TNF-alpha or -beta (e.g. infectious or
 CC parasitic diseases, shock, cachexia, autoimmune diseases, adult
 CC respiratory distress syndrome etc.) or side effects of treatment with
 CC TNF-alpha). They can also be used as diagnostic reagents for
 CC assaying TNF and in study of TNF-receptor interactions.
 CC See also 006282-006285.

 PT Insoluble tumour necrosis factor binding proteins - and DNA
 PT encoding them, useful in pharmaceutical prods. and for antibody
 PT prodn.
 CC claim 1; Fig 1; 26pp; German.
 CC Partial amino acid sequences were determined for the 55 and 75KD
 CC TNF-BPs (see R11072-R11081) and oligonucleotide primers were
 CC synthesised based on these partial sequences. The primers were used

CC to produce a cDNA fragment for use as a probe to screen a human
 CC placental cDNA bank constructed in lambda gtl1. Positive clones were
 CC identified and sequenced. DNA constructs comprising the TNF-BP coding
 CC sequence may also contain a fragment encoding a human Ig domain.
 CC Recombinant constructs are used to transform cells to confer
 CC improved TNF-binding properties.
 CC See also 010956.

CC	-I- FUNCTION: RECEPTOR FOR TNF ALPHA. THE ADAPTOR MOLECULE FADD	
CC	RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING	
CC	AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)	
CC	PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE	
CC	SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE	
CC	PROTEASE) MEDIATING APOPTOSIS (BY SIMILARITY)	
CC	-I- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS T	
CC	HOMOMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS	
CC	PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY	
CC	WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING	
CC	PROTEINS SUCH AS TRAFs, RIP AND POSSIBLY FADD, ARE RECRUITED TO	
CC	TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX	
CC	ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND	
CC	NF-KAPPA B SIGNALING (BY SIMILARITY).	
CC	-I- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.	
CC	-I- SIMILARITY: CONTAINS A LA-NEFR/TNFR-TYPE CYSTEINE-RICH REGION.

Title: >US-08-804-166-2
Description: (1-256) from US08804166.pep
Perfect Score: 1994
Sequence: 1 SRTSLLAFLGLCLPMLQEG.....GFEVNHGCHCSTCYTHKS 256

Scoring table: PAM 150
Gap 11

Searched: 69112 seqs, 25083644 residues

Post-processing: Minimum Match 0%
Listing first 45 summaries

Database: swiss-prot35
1:swiss1

Statistics: Mean 42.029; Variance 63.165; scale 0.665

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

CC -1- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
CC RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
CC PROTEASES) MEDIATING APOPTOSIS.
CC -1- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS TO
CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
CC PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
CC PROTEINS SUCH AS TRAFs, RIP AND POSSIBLY FADD, ARE RECRUITED TO
CC TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
CC NF-KAPPA B SIGNALING.
CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
CC -1- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

CC -1- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
CC RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
CC PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).
CC -1- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS TO
CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
CC PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
CC PROTEINS SUCH AS TRAFs, RIP AND POSSIBLY FADD, ARE RECRUITED TO
CC TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
CC NF-KAPPA B SIGNALING (BY SIMILARITY).
CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
CC -1- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

Statistics: Mean 41.143; Variance 64.343; scale 0.639

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

FT PT DNA encoding TNF binding protein and TNF-receptor - used in
PS tumour treatment and to understand mechanism to TNF action
PS Disclosure: Fig 1(1-3); 51pp; German.
CC PTNF-BP15 is one of 30 positives clones in a screened cDNA library
CC from induced TNF-induced fibrosarcoma cells. A TNF-BP had been
CC isolated from the urine of patients with uremia and probes/primers
CC were constructed from the determined amino acid sequence.
CC To produce a vector expressing a soluble form of TNF-binding
CC protein, this plasmid was cut with XbaI, amplified by PCR and the
CC amplified DNA cut with BamHI and EcoRI.
CC (BR) cut with the same enzymes to recover PTNF-BP. This was cut
CC with BamHI and EcoRI, and the recovered fragment inserted into
CC PAD-CMV1 (006283) to give the required plasmid PADTNF-BP.
CC See also 006282-006285.

PT receptor - useful in therapy, diagnosis and assays of e.g.
PT rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.
PS Disclosure: Page 57-59; 85pp; English.
CC The sequences given in 049931-32 encode human tumour necrosis factor
CC receptor (TNF-R) and the sequences in 049933-34 encode human
CC interleukin-1 receptor (IL-1R). These sequences were used in the
CC production of a fusion protein which conformed to one of the
CC formulae:
TNF-R-linker-TNF-R-linker-IL-1R

```

CC	IL-1R-linker-TNF-R-linker-TNF-R or	CC
CC	TNF-R-linker-TNF-R-linker-TNF-R	CC
CC	The linker may comprise 5-100 amino acids selected from Gly, Asp,	CC
CC	Ser, Thr and Ala. These linkers separate the individual moieties	CC
CC	by such a distance that each component of the fusion protein is	CC
CC	capable of folding into the secondary or tertiary structure required	CC
CC	for its biological activity. These fusion proteins may be used in	CC
CC	therapy, diagnosis and assays for conditions mediated by TNF or IL-1,	CC
CC	particularly in conditions in which both TNF and IL-1 play a causative	CC
CC	role. They may be used to treat cachexia, Rheumatoid arthritis,	CC
CC	cerebral malaria, multiple sclerosis, pulmonary fibrosis and silicosis,	CC
CC	celiac disease, allograft and xenograft rejection in graft versus	CC
CC	host disease, sepsis, septic shock, inflammation, allergies and	CC
CC	autoimmune dysfunctions.	CC

PT New tumour necrosis factor alpha binding protein and polypeptide
PT - useful in treating cachexia, sepsis and auto immune diseases
PS e.g. rheumatoid arthritis
PS Disclosure: Fig 1: 25pp; English.
CC The sequence is that of DNA encoding tumour necrosis factor alpha
CC binding protein which was obtd. from a human placental cDNA library
CC in lambda g11 using a probe (Q20974). The DNA also encodes the
CC extracellular domain of human TNF alpha receptor and as such it is
CC useful for treating diseases where TNF alpha is involved as a
CC causative agent. e.g. cachexia, sepsis and autoimmune diseases,
CC specifically rheumatoid arthritis. See also Q20974.

PT Tumour necrosis factor inhibitor - for suppression of TNF-alpha
PT and beta, useful as therapeutic agent.
PS Disclosure: Fig 21; 142pp; English.
CC The sequence encodes the entire 30 kD TNF inhibitor. The clone from
CC which the sequence was obtd. was isolated from a cDNA library
CC prepd. from RNA form U937 cells treated with PMA/PHA. The whole
CC gene can be inserted into expression vectors for prepn. of TNF
CC inhibitor for use in the treatment of inflammatory and degenerative
CC diseases.
CC See also Q10878, Q10884 and Q10907.

PT Insoluble tumour necrosis factor binding proteins - and DNA
PT encoding them, useful in pharmaceutical prods. and for antibody
PT protn.
PS Claim 4: Fig 1: 26pp; German.
CC Partial amino acid sequences were determined for the 55 and 75kD
CC TNF-BPs (see R11072-R11081) and oligonucleotide primers were
CC synthesised based on these partial sequences. The primers were used
CC to produce a cDNA fragment for use as a probe to screen a human
CC placentar cDNA bank constructed in lambda gill. Positive clones were
CC identified and sequenced. DNA constructs comprising the TNF-BP coding
CC sequence may also contain a fragment encoding a human Ig domain.
CC Recombinant constructs are used to transform cells to confer
CC improved TNF-binding properties.
CC See also Q10956.

PT	New protease capable of cleaving soluble tumour necrosis factor	
PT	(TNF) receptor - from cell-bound TNF- receptor, useful for	
PT	antagonising deleterious effects of TNF.	
PS	Disclosure; Fig 1; 40pp; English.	
CC	This sequence represents human p55 tumour necrosis factor (TNF-R) DNA.	
CC	Expression of this receptor is regulated by shedding of the extracellular	
CC	receptor fragment. The p55 TNF-R can be shed in response to different	
CC	inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell	
CC	type. The only region of the receptor whose structure affects the	
CC	shedding response is the spacer region (see R75012) in the extracellular	
CC	domain. This region is located close to a site of cleavage of the	
CC	molecule, and links the Cys rich module to the transmembrane domain.	
CC	Th	
CC	spacer region of the encoded protein was used to create the chimera	
CC	between human p55 TNF-R and murine epidermal growth factor receptor	
CC	(EGF-R) that are represented by R75007-11. This spacer region was	
CC	subjected to deletion mutations (R75013-25) and substitutions	
CC	(R75026-47). Of the spacer region, the most important residues are	
CC	Asn 112, Val 173, Lys 174 and Gly 175, with Val 173 being the most	
CC	important of these. The shedding of the receptor is independent of the	
CC	side chain identity of these residues, with the exception of a limited	
CC	dependence on the identity of Val 173. Mutations which alter the	
CC	conformation of the protein adversely effect the shedding process. The	
CC	mutations shown in R75013-47 were introduced in order to create an	
CC	inhibitor of a protease that is capable of cleaving the soluble TNF-R	
CC	from the cell bound TNF-R. Fragments of these inhibitors can be seen in	
CC	R75017-9, R75025, R75033-5 and R75042-3. These protease inhibitors can	
CC	be used for enhancing TNF function.

 PT transfecting eukaryotic cells with vector contg. deoxyribonucleic
 PT acid encoding human type T TNF receptor or soluble domain
 PS Disclosure: Fig 1(D): 30pp; English.
 CC The Tumour Necrosis Factor Binding Protein I is the soluble form of
 CC type I TNF-receptor and constitutes a fragment of the cell surface
 CC form of this receptor, corresp. to its extracellular domain.
 CC There is no characteristic poly(A) addition signal near the 3' end
 CC of the cDNA. The sequence ACTAA (tag m) may serve as an
 CC alternative to this signal, but with low efficiency.
 CC See also Q1212-15.

 PT New glyco-protein hormone analogues - for inducing fertility as
 PT immuno-castration agents, for suppressing reproductive system
 PT development and as immuno-contragestive vaccines.
 PS Example 3; Fig 4a; 94pp; English.
 CC The sequence is an analogue of hCG beta subunit cDNA contg. two
 CC silent mutations which eliminate restriction sites. It was prepd.
 CC from the plasmid pKMB-hCG-beta, a construct contg. the hCG beta
 CC subunit isolated from human placenta (Fiddes and Goodman) in
 CC plasmid pKMB, a derivative of pUC18 designed to facilitate cloning
 CC of glycoprotein hormones. The sequence was used as the starting
 CC construct for many mutants. (See R15061-R15125 and R15161-R15198).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 PT Hybrid dimeric protein comprising two co-expressed units - each
 PT based on receptor or ligand and a subunit of a heterodimeric
 PT hormone, especially FSH, for inducing follicular maturation
 PS Example; Pages 39-40; 60pp; English.
 CC A novel fusion protein comprises 2 dimer forming co-expressed amino
 CC acid sequences, each consisting of a homodimeric or heterodimeric
 CC receptor chain or ligand, with ligand-receptor binding activity,
 CC bound directly or via a peptide linker to a subunit of a
 CC heterodimeric protein hormone capable of forming a heterodimer with
 CC the hormone's other subunits. The fusion protein, e.g. the
 CC thrombopoietin (TPO)/human chorionic gonadotropin-beta subunit
 CC (hcg-beta) fusion protein denoted by the present sequence,
 CC significantly increases the biological activity of the hormone
 CC component, reducing the requirement for hormone itself and the
 CC number of injections needed.

PT New ethylene glycolated polypeptide(s) with improved
PT pharmacokinetic properties - for treating e.g. TNF and IL-1
PT mediated diseases, e.g. adult respiratory distress syndrome,
PT rheumatoid arthritis, septic shock etc.
PS Claim 54; Fig 2; 100pp: English.
CC The sequence shows a native 30 kD TNF inhibitor which may be
CC modified to contain at least one non-native cysteine residue, pref.
CC at positions 1, 14, 105, 111 and/or 165. The non-native cysteine is
CC joined to a non-peptidic polymer, pref. monomethoxy PEG via
CC thio-ether bonds. Two such TNF inhibitor moieties may be linked via
CC this non-peptidic spacer. The modified polypeptides show improved
CC pharmacokinetic properties, i.e. increased mol. wt. hence reduced
CC clearance rate following s.c. or systemic administration, increased
CC sol. of native TNF inhibitors, and reduced antigenicity. The
CC polypeptides may be used for treatment of TNF mediated diseases such
CC as adult respiratory distress syndrome, pulmonary fibrosis, rheumatoid
CC arthritis, inflammatory bowel disease and septic shock. The same
CC method may be applied to the interleukin-1 receptor antagonist

CC IL-1ra. See also R27495.

PT New polypeptide capable of binding human TNF alpha - comprises
PT first three cysteine-rich subdomains of TNF alpha receptor for
PT treating autoimmune disease, septic shock, HIV etc.
PS Example: Fig 7; 43pp: English.
CC This sequence is a truncated TNF-alpha receptor derivative, as encoded
CC in pTNFrec. This was produced as described in Q24440.
CC This derivative lacks the 81 carboxyl terminal residues of the
CC cytoplasmic domain. The derivative could be used in the
CC regulation of TNF-alpha mediated responses by binding and
CC sequestering human TNF-alpha e.g. in the treatment of pulmonary
CC diseases, septic shock, HIV infection, malaria, viral meningitis,
CC graft versus host disease and autoimmune diseases, esp. rheumatoid
CC arthritis.

PT New hybrid peptide(s) for binding cytokine(s) - comprising a
PT malaria parasite peptide capable of binding a red blood cell and
PT a receptor peptide.
PS Example A: Page 54-55; 93pp; English.
CC Hybrid peptides for binding cytokines, comprising a malaria parasite
CC (Plasmodium falciparum) peptide (capable of binding to a red blood
CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
CC of these hybrid peptides. R70108 is a fusion of tumour necrosis factor
CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)
CC and glycoprotein binding protein (GBP) homologue (GBPH). The
CC use of cytokine receptors not normally found on RBCs means that the
CC cytokine can bind harmlessly to the RBC without deleterious effect.
CC The RBC protects the hybrid peptides from excretion from the kidney, and
CC due to steric hindrance prevents the cytokines binding to a receptor in
CC another cell. GBP 130 or GBPH are the pref. malaria parasite peptides
CC used, others include EBA 175 (175 kDa erythrocyte binding antigen), PMMSA
CC (pre major merozoite surface antigen) and the Duffy binding receptor
CC molecule (eg. exhibited by Plasmodium vivax). These peptides bind to
CC pref. glycoprotein A, B and C, sialo glycoproteins, found on the surface
CC of RBCs. The hybrid peptides are thus used to lower the levels of free
CC cytokines in the circulation to reduce pathological damage.

PT New fusion protein tumour necrosis factor and human interleukin-1
receptor - useful in therapy, diagnosis and assays of e.g.
PT rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.
PS Disclosure: Page 57-59; 85pp; English.
CC The sequences given in R42058-59 represent human tumour necrosis
factor receptor (TNF-R) and the sequences in R42060-61 represent
human interleukin-1 receptor (IL-1R). These sequences were used in
CC the production of a fusion protein which conformed to one of the
CC formulae:
CC TNF-R-linker-TNF-R-linker-IL-1R
CC IL-1R-linker-TNF-R-linker-TNF-R or
CC TNF-R-linker-TNF-R
CC The linker may comprise 5-100 amino acids selected from gly, Asp,
CC Ser, Thr and Ala. These linkers separate the individual moieties
CC by such a distance that each component of the fusion protein is
CC capable of folding into the secondary or tertiary structure required
CC for its biological activity. These fusion proteins may be used in
CC therapy, diagnosis and assays for conditions mediated by TNF or IL-1,
CC particularly in conditions in which both TNF and IL-1 play a causative
CC role. They may be used to treat cachexia, rheumatoid arthritis,
CC diabetes, multiple sclerosis, pulmonary fibrosis and silicosis,
CC cerebral malaria, allograft and xenograft rejection in graft verses
CC host disease, sepsis, septic shock, inflammation, allergies and

CC autoimmune dysfunctions.

PT Tumour necrosis factor inhibitor - for suppression of TNF-alpha
PT and -beta, useful as therapeutic agent.
PS Disclosure: Fig 21; 142pp; English.
CC The sequence comprises the entire 30 kD TNF inhibitor. The clone
CC from which the sequence was deduced was isolated from a cDNA
CC library prep. from RNA form U937 cells treated with PMA/PMA.
CC The whole gene can be inserted into expression vectors for prepn.
CC of TNF inhibitor for use in the treatment of inflammatory and
CC degenerative diseases. The active protein is claimed (Claim 8).
CC See also R10984 and R11001.

PT	New tumour necrosis factor alpha binding protein and polypeptide	
PT	- useful in treating cachexia, sepsis and autoimmune diseases	
PT	e.g. Rheumatoid arthritis	
PS	Disclosure; Fig 1; 25pp; English.	
CC	The amino acid sequence is that of tumour necrosis factor alpha	
CC	binding protein which contains the extracellular domain of human TNF	
CC	alpha receptor. It is soluble and can be used in the regulation of	
CC	TNF-mediated responses by binding and sequestering the cytokine. It	
CC	can therefore be used therapeutically to treat disorders such as	
CC	cachexia, sepsis and autoimmune diseases, specifically rheumatoid	
CC	arthritis.

 PT DNA encoding TNF binding protein and TNF-receptor - used in
 PT tumour treatment and to understand mechanism to TNF action
 PS Disclosure: Fig 91(1-2): 51pp; German.
 CC rATNF-R8 (Q06284) was used to screen the HS913T cDNA library.
 CC LambdaTNF-R2 encodes the complete human TNF-R2 and was used to
 CC construct a plasmid (pADTNF-R) expressing the product the same way
 CC as pADTNF-BP (see Q06282). The expressed proteins are useful
 CC prophylactically and therapeutically to control disorders which
 CC involve the damaging effects of TNF-alpha or -beta (e.g. infectious or
 CC parasitic diseases, shock, cachexia, autoimmune diseases, adult
 CC respiratory distress syndrome etc., or side effects of treatment with
 CC TNF-alpha). They can also be used as diagnostic reagents for
 CC assaying TNF and in study of TNF-receptor interactions.
 CC See also Q06282-Q06285.

 PT Insoluble tumour necrosis factor binding proteins - and DNA
 PT encoding them, useful in pharmaceutical prods. and for antibody
 PT prodn.
 PS Claim 1; Fig 1; 26pp; German.
 CC Partial amino acid sequences were determined for the 55 and 75kD
 CC TNF-BPs (see R11072-R11081) and oligonucleotide primers were
 CC synthesised based on these partial sequences. The primers were used
 CC to produce a cDNA fragment for use as a probe to screen a human
 CC placental cDNA bank constructed in lambda g11. Positive clones were
 CC identified and sequenced. DNA constructs comprising the TNF-BP coding
 CC sequence may also contain a fragment encoding a human Ig domain.
 CC Recombinant constructs are used to transform cells to confer
 CC improved TNF-binding properties.
 CC See also Q10956.

```

COMMENT This protein is one of two known receptors for both TNF-alpha (cachectin) and TNF-beta (lymphotoxin).

CLASSIFICATION #superfamily tumor necrosis factor receptor type 1; NGF receptor repeat homology duplication; glycoprotein; receptor; transmembrane protein

FEATURE

1-79 #domain signal sequence #status predicted #label SIG\

30-461 #product tumor necrosis factor receptor type 1 #status predicted #label MAT\

30-211 #domain extracellular #status predicted #label EXT\

30-201 #product tumor necrosis factor binding protein #status predicted #label TBP\

44-82 #domain NGF receptor repeat homology #label NG1\

84-126 #domain NGF receptor repeat homology #label NG2\

127-167 #domain NGF receptor repeat homology #label NG3\

168-204 #domain NGF receptor repeat homology #label NG4\

212-234 #domain transmembrane #status predicted #label MEM\

235-461 #domain intracellular #status predicted #label INT\

54,151,201 #binding_site carbohydrate (Asn) (covalent) #status predicted

SUMMARY #length 461 #molecular-weight 50969 #checksum 1617

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
 score greater than or equal to the score of the result being printed,
 and is derived by analysis of the total score distribution.

 PT DNA encoding TNF binding protein and TNF-receptor - used in
 PT tumour treatment and to understand mechanism to TNF action
 PS Disclosure: Fig 1(1-3); 51pp; German.
 CC PNTF-BP15 is one of 30 positives clones in a screened cDNA library
 CC from induced TNF-induced fibrosarcoma cells. A TNF-BP had been
 CC isolated from the urine of patients with uraemia and probes/primers
 CC were constructed from the determined amino acid sequence.
 CC to produce a vector expressing a soluble form of TNF-binding
 CC protein, this plasmiid was cut with XmnI, amplified by PCR and the
 CC amplified DNA cut with BamHI and EcoRI.
 CC The resulting 0.75 kb DNA fragment was inserted into pT7/3 alpha-19
 CC (BRU) cut with the same enzymes to recover PNTF-BP. This was cut
 CC with BamHI and EcoRI, and the recovered fragment inserted into
 CC PAD-CMV1 (006283) to give the required plasmiid PADTNF-BP.
 CC See also 006282-006285.

PT New fusion protein tumour necrosis factor and human interleukin-1

PT receptor - useful in therapy, diagnosis and assays of e.g.

PT rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.

PS Disclosure; Page 57-59; 85pp; English.

CC The sequences given in Q49931-32 encode human tumour necrosis factor
CC receptor (TNF-R) and Q49933-34 encode human
CC interleukin-1 receptor (IL-1R). These sequences were used in the
CC production of a fusion protein which conformed to one of the
CC formulae:
CC TNF-R-linker-TNF-R-linker-IL-1R
CC IL-1R-linker-TNF-R-linker-TNF-R or
CC TNF-R-linker-TNF-R
CC The linker may comprise 5-100 amino acids selected from Gly, Asp,
CC Ser, Thr and Ala. These linkers separate the individual moieties
CC by such a distance that each component of the fusion protein is
CC capable of folding into the secondary or tertiary structure required
CC for its biological activity. These fusion proteins may be used in
CC therapy, diagnosis and assays for conditions mediated by TNF or IL-1,
CC particularly in conditions in which both TNF and IL-1 play a causative
CC role. They may be used to treat cachexia, Rheumatoid arthritis,
CC diabetes, multiple sclerosis, pulmonary fibrosis and silicosis,
CC cerebral malaria, allograft and xenograft rejection in graft versus
CC host disease, sepsis, septic shock, inflammation, allergies and
CC autoimmune dysfunctions.

PT New tumour necrosis factor alpha binding protein and polypeptide
PT - useful in treating cachexia, sepsis and auto immune diseases
PT e.g. rheumatoid arthritis
PS Disclosure; Fig 1; 25pp; English.
CC The sequence is that of DNA encoding tumour necrosis factor alpha
CC binding protein which was obtd. from a human placental cDNA library
CC in lambda gt11 using a probe (Q20974). The DNA also encodes the
CC extracellular domain of human TNF alpha receptor and as such it is
CC useful for treating diseases where TNF alpha is involved as a
CC causative agent, e.g. cachexia, sepsis and autoimmune diseases,
CC specifically rheumatoid arthritis. See also Q20974.

PT New polypeptide capable of binding human TNF alpha - comprises
PT first three cysteine-rich subdomains of TNF alpha receptor for
PT treating autoimmune disease, septic shock, HIV etc.
PS Claim 4; Fig 1; 43pp; English.
CC This sequence encodes human TNF-alpha 55KD receptor. A placenta cDNA
CC library in gt10 was screened with probe Q29236. Ten hybridising clones
CC were plaque purified and cDNA size determined by PAGE against an
CC Eco RI digested phage DNA. The inserts of two cDNA clones were then
CC sequenced. The coding region of the majority of the human TNF-alpha
CC 55KD receptor was isolated as an EcoRI fragment encoding 374 amino
CC acids, and cloned into a mammalian cell expression vector, resulting
CC in pTRNF.R. A derivative of the TNF-alpha receptor was produced by
CC engineering a termination codon just prior to the transmembrane
CC domain. PCR with primers Q29237,8 generated a 300bp
CC restriction fragment which was cloned into pTRNF.R, giving pTRNF.Rcd.
CC DNA sequencing confirmed this contained the designed DNA sequence.
CC The TNF-alpha receptor expression plasmids were then transfected
CC into monkey COS-7 cells.

 PT New protease capable of cleaving soluble tumour necrosis factor
 PT (TNF) receptor - from cell-bound TNF- receptor, useful for
 PT antaonising deleterious effects of TNF.
 PS Disclosure: Fig 1: 400p; English.
 CC This sequence represents human p55 tumour necrosis factor (TNF-R) DNA.
 CC Expression of this receptor is regulated by shedding of the extracellular
 CC receptor fragment. The p55 TNF-R can be shed in response to different
 CC inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell
 CC type. The only region of the receptor whose structure affects the
 CC shedding response is the spacer region (see R75012) in the extracellular
 CC domain. This region is located close to a site of cleavage of the
 CC molecule, and links the Cys rich module to the transmembrane domain. The
 CC spacer region of the encoded protein was used to create the chimera
 CC between human p55 TNF-R and murine epidermal growth factor receptor
 CC (EGF-R) that are represented by R75007-11. This spacer region was
 CC subjected to deletion mutations (R75013-25) and substitutions

CC (R75026-47). Of the spacer region, the most important residues are
 CC Asn 172, Val 173, Lys 174 and Gly 175, with Val 173 being the most
 CC important of these. The shedding of the receptor is independent of the
 CC side chain identity of these residues, with the exception of a limited
 CC dependence on the identity of Val 173. Mutations which alter the
 CC conformation of the protein adversely effect the shedding process. The
 CC mutations shown in R75013-47 were introduced in order to create an
 CC inhibitor of a protease that is capable of cleaving the soluble TNF-R
 CC from the cell bound TNF-R. Fragments of these inhibitors can be seen in
 CC R75017-9, R75025, R75033-5 and R75042-3. These protease inhibitors can
 CC be used for enhancing TNF function.

PT Modulating activity of tumour necrosis factor receptor - using
PT peptides), antihodias, etc. which interact with critical regions
PT of receptor or effector protein, for controlling auto-immune
PT disease, septic shock, etc.
PS Claim 2: Figure 1; 17pp: English.
CC Modification of the tumour necrosis factor receptor by mutation or
CC deletion modulates signal transduction and/or cleavage effected by
CC the receptor. This modulation of activity can also be achieved
CC using effector proteins which interact with the TNF receptor.
CC Molecules which interact with the TNF receptor or the effector
CC proteins can be used to treat or prevent diseases associated with
CC TNF activity e.g. autoimmune disease; rheumatoid arthritis; graft
CC rejection; graft vs. host disease or septic shock. They can also
CC be used to treat overdoses of exogenous TNF.

PT New polypeptide capable of binding human TNF alpha - comprises
PT first three cysteine-rich subdomains of TNF alpha receptor for
PT treating autoimmune disease, septic shock, HIV etc.
PS Example; Fig 11: 43pp; English.
CC This sequence encodes the designed TNF-alpha 55kd receptor
CC derivative, as present in pdeltaIV. This construct was generated by
CC cloning of the BglII/HindIII digested product of a PCR using
CC primers 5A and 4D into BglII/HindIII 5'-deltaIIA. This introduced
CC a termination codon after amino acid 167, to yield pdeltaIV.
CC This derivative lacks the membrane proximal 4th subdomain, yet
CC retains the ability to bind TNF-alpha with high affinity
CC (10power8 - 10power9 Mpower-1) The deriv. can be used in the
CC regulation of TNF-alpha mediated responses by binding and
CC sequestering human TNF-alpha e.g. in the treatment of pulmonary
CC diseases, septic shock, HIV infection, malaria, viral meningitis,
CC graft versus host disease and autoimmune diseases, esp. Rheumatoid
CC arthritis. The deriv. is given at 10-100ug/dose.

CC New polypeptide capable of binding human TNF alpha - comprises
 PT first three cysteine-rich subdomains of TNF alpha receptor for
 PR treating autoimmune disease, septic shock, HIV etc.
 PS Example: Fig 8: 43pp: English
 CC This sequence encodes the designed TNF-alpha 55KD receptor
 CC derivative, as present in peltai. This construct was generated by
 CC joining PCR fragments by means of overlaps introduced into the
 CC primers used for PCR. Gel purified products of PCR's using
 CC 5'Cla, IA, IB, and 5D primers were mixed and subjected to further
 CC amplification using 5'Cla and 5D as primers. The resulting fragment
 CC was digested with ClaI and BglII and cloned into ClaI/BglII
 CC digested pINRecd. to yield pdelat, containing the sequence given.
 CC This derivative could be used to regulate TNF-alpha mediated responses
 CC by binding and sequestering human TNF-alpha e.g. in the treatment of
 CC pulmonary diseases, septic shock, HIV infection, malaria, viral
 CC meningitis, graft versus host disease and autoimmune diseases, esp.
 CC rheumatoid arthritis.

 PT Animal model for Helicobacter pylori infection - comprising
 PT transgenic mouse expressing human enzyme promoting intestinal
 PT adhesion
 PS Example 2; Columns 25-28; 24pp: English.
 CC A claimed transgenic mouse expresses, in its intestinal epithelial
 CC cells, the enzyme human GDP-L-fucose:beta-D-galactoside 2-alpha-L-
 CC fucosyltransferase (also called alpha 1,2 FT) or human GDP-L-fucose:
 CC beta-D-N-acetylglucosamide 3/4-alpha-L-fucosyltransferase (also
 CC called alpha 1,3/4 FT). The enzyme is expressed under the
 CC control of a gut epithelial cell-specific promoter and Helicobacter
 CC pylori adheres to the transgenic cells. The transgenic mouse and
 CC intestinal epithelial cells from it are useful as models for screening
 CC compounds for the ability to inhibit adhesion of H. pylori to gut
 CC epithelial cells. The first 617 nucleotides of the present chimeric
 CC sequence encode the promoter from rat liver fatty acid binding protein
 CC (Fabp1) which can direct foreign gene expression to the pit cell
 CC lineage of the mouse gastric epithelium, to proliferating and non-
 CC proliferating cells in intestinal crypts, as well as to the four
 CC principal differentiated cell lineages along the crypt-to-villus axis
 CC of the small intestine. The remainder of the chimeric sequence
 CC corresponds to exon 1 of the human growth hormone (hGH) gene, into
 CC which a sequence coding for a human fucosyltransferase (hFT) can be

CC inserted. No hgh will be produced because the initiator Met codon
CC and the first translation stop codon will be from the hft sequence
CC and there is no ribosome re-entry sequence. The hgh exon 1 ensures
CC efficient splicing of the transgene primary transcript, improves
CC stability of the cytoplasmic hft mRNA and allows transgene
CC expression to be monitored by in situ hybridisation using a
CC digoxigenin-labelled hgh oligonucleotide.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Hybrid dimeric protein comprising two co-expressed units - each
based on receptor or ligand and a subunit of a heterodimeric
hormone, especially FSH, for inducing follicular maturation
PS Example; Pages 37-38; 60pp; English.
CC A novel fusion protein comprises 2 dimer forming co-expressed amino
acid sequences, each consisting of a homodimeric or heterodimeric
CC receptor chain or ligand, with ligand-receptor binding activity,
CC bound directly or via a peptide linker to a subunit of a
CC heterodimeric protein hormone capable of forming a heterodimer with
CC the hormone's other subunits. The fusion protein, e.g. the
CC thrombopoietin (TPO)/human chorionic gonadotropin-alpha subunit
CC (hcg-alpha) fusion protein denoted by the present sequence,
CC significantly increases the biological activity of the hormone
CC component, reducing the requirement for hormone itself and the
CC number of injections needed.

 PT Hybrid dimeric protein comprising two co-expressed units - each
 PT based on receptor or ligand and a subunit of a heterodimeric
 PT hormone, especially FSH, for inducing follicular maturation
 PS Example; Pages 39-40; 60pp; English.
 CC A novel fusion protein comprises 2 dimer forming co-expressed amino
 CC acid sequences, each consisting of a homodimeric or heterodimeric
 CC receptor chain or ligand, with ligand-receptor binding activity,
 CC bound directly or via a peptide linker to a subunit of a
 CC heterodimeric protein hormone capable of forming a heterodimer with
 CC the hormone's other subunits. The fusion protein, e.g. the
 CC thrombopoietin (TPO)/human chorionic gonadotropin-beta subunit
 CC (hcg-beta) fusion protein denoted by the present sequence,
 CC significantly increases the biological activity of the hormone
 CC component, reducing the requirement for hormone itself and the
 CC number of injections needed.

PT New hybrid peptide(s) for binding cytokine(s) - comprising a
 PT malaria parasite peptide capable of binding a red blood cell and
 PT a receptor peptide.
 PS Example A: Page 53-54; 93pp; English.
 CC Hybrid peptides for binding cytokines, comprising a malaria parasite
 CC (Plasmodium falciparum) peptide (capable of binding to a red blood
 CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
 CC of these hybrid peptides. R70107 is a fusion of tumour necrosis factor
 CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)
 CC and glycoprotein binding protein (GBP) 130. The use of cytokine
 CC receptors not normally found on RBCs means that the cytokine can bind
 CC harmlessly to the RBC without deleterious effect. The RBC protects the
 CC hybrid peptides from excretion from the kidney, and due to steric
 CC hindrance prevents the cytokines binding to a receptor in another cell.
 CC GBP 130 or GBPH (GBP homologue) are the pref. malaria parasite peptides
 CC used, others include EBA 175 (175 kDa erythrocyte binding antigen),
 CC PMMSA (pre major merozoite surface antigen) and the Duffy binding
 CC receptor molecule (eg. exhibited by Plasmodium vivax). These peptides
 CC bind to pref. glycoprotein A, B and C, stailo glycoproteins, found on
 CC the surface of RBCs. The hybrid peptides are thus used to lower
 CC the levels of free cytokines in the circulation to reduce pathological
 CC damage.

 PT New polypeptide capable of binding human TNF alpha - comprises
 PT first three cysteine-rich subdomains of TNF alpha receptor for
 PT treating autoimmune disease, septic shock, HIV etc.
 PS Example: Fig 1; 43pp; English.
 CC This sequence was deduced from human TNF-alpha cDNA isolated as in
 CC Q24440. The first 35 amino acids are generally quite hydrophobic
 CC and probably represent a signal sequence. Residues 35-40 are highly
 CC charged (DREKR) and this is not normally found in secretory
 CC signal sequences. It is possible the receptor is processed by
 CC proteolysis after residue 40 which contains a dibasic cleavage site
 CC (KR). Hydrophaty analysis of this sequence predicts a single
 CC transmembrane domain of 23 amino acids, dividing the sequence into
 CC an extracellular domain of 171 residues and a cytoplasmic domain of
 CC 221 residues. The sequence contains a large number of cysteine
 CC residues, the arrangement of which is similar to that of other cell
 CC surface proteins, suggesting the TNF-alpha receptor is structurally
 CC related to a family of receptors.

CC NOTE-- Residues 371,2 given in the sequence as T,L, are encoded by
 CC TGG (W) and AAG (K).

PT New fusion protein tumour necrosis factor and human interleukin-1
PT receptor - useful in therapy, diagnosis and assays of e.g.
PT rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.
PS Disclosure: Page 57-59; 85pp; English.
CC The sequences given in R42058-59 represent human tumour necrosis
CC factor receptor (TNF-R) and the sequences in R42060-61 represent in
CC human interleukin-1 receptor (IL-1R). These sequences were used in
CC the production of a fusion protein which conformed to one of the
CC formulae:
CC TNF-R-linker-TNF-R-linker-IL-1R
CC IL-1R-linker-TNF-R-linker-TNF-R or
CC TNF-R-linker-TNF-R
CC The linker may comprise 5-100 amino acids selected from Gly, Asp,
CC Ser, Thr and Ala. These linkers separate the individual moieties
CC by such a distance that each component of the fusion protein is
CC capable of folding into the secondary or tertiary structure required
CC for its biological activity. These fusion proteins may be used in
CC therapy, diagnosis and assays for conditions mediated by TNF or IL-1,
CC particularly in conditions in which both TNF and IL-1 play a causative
CC role. They may be used to treat cachexia, rheumatoid arthritis,
CC diabetes, multiple sclerosis, pulmonary fibrosis and silicosis,
CC cerebral malaria, allograft and xenograft rejection in graft versus
CC host disease, sepsis, septic shock, inflammation, allergies and
CC autoimmune dysfunctions.

 PT New hybrid peptide(s) for binding cytokine(s) - comprising a
 PT malaria parasite peptide capable of binding a red blood cell and
 PT a receptor peptide.
 PS Example A: Page 46-47; 93pp; English.
 CC Hybrid peptides for binding cytokines, comprising a malaria parasite
 CC (Plasmodium falciparum) peptide (capable of binding to a red blood
 CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
 CC of these hybrid peptides. R70103 is a fusion of tumour necrosis factor
 CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)

CC and glycophorin binding protein (GBP) 130. The use of cytokine
 CC receptors not normally found on RBCs means that the cytokine can bind
 CC harmlessly to the RBC without deleterious effect. The RBC protects the
 CC hybrid peptides from excretion from the kidney, and due to steric
 CC hindrance prevents the cytokines binding to a receptor in another cell.
 CC GBP 130 or GBPH (GBP homologue) are the pref. malaria parasite peptides
 CC used, others include EBA 175 (175 kda erythrocyte binding antigen),
 CC PMSEA (pre major merozoite surface antigen) and the Duffy binding
 CC receptor molecule (eg. exhibited by Plasmodium vivax). These peptides
 CC bind to pref. glycophorin A, B and C, sialo glycoproteins, found on
 CC the surface of RBCs. The hybrid peptides are thus used to lower
 CC the levels of free cytokines in the circulation to reduce pathological
 CC damage.

 PT New hybrid peptide(s) for binding cytokine(s) - comprising a
 PT malaria parasite peptide capable of binding a red blood cell and
 PT a receptor peptide.
 PS Example A: Page 54-55; 93pp; English.
 CC Hybrid peptides for binding cytokines, comprising a malaria parasite
 CC (Plasmodium falciparum) peptide (capable of binding to a red blood
 CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
 CC of these hybrid peptides. R70108 is a fusion of tumour necrosis factor
 CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)
 CC and glycophorin binding protein (GBP) homologue (GBPH). The
 CC use of cytokine receptors not normally found on RBCs means that the
 CC cytokine can bind harmlessly to the RBC without deleterious effect.
 CC The RBC protects the hybrid peptides from excretion from the kidney, and
 CC due to steric hindrance prevents the cytokines binding to a receptor in
 CC another cell. GBP 130 or GBPH are the pref. malaria parasite peptides
 CC used, others include EBA 175 (175 kda erythrocyte binding antigen), PMSEA
 CC (pre major merozoite surface antigen) and the Duffy binding receptor

restriction endonuclease evidence indicates that a
single gene codes for the alpha chain common to the
four dimeric hormones: thyrotropin, lutropin,
follitropin, and chorionadotropin
previously the mature alpha chain (residues 25-116) was
isolated from each of the hormones and its sequence
was determined, as documented below

 CC -1- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
 CC RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
 CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
 CC PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
 CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
 CC PROTEASES) MEDIATING APOPTOSIS.
 CC -1- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS TO
 CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
 CC PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
 CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
 CC PROTEINS SUCH AS TRAFs, RIP AND POSSIBLY FADD, ARE RECRUITED TO
 CC TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
 CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
 CC NF-KAPPA B SIGNALING.
 CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

Statistics: Mean 41.694; Variance 64.494; scale 0.646

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT	DNA encoding TNF binding protein and TNF- receptor - used in	
PT	tumour treatment and to understand mechanisms to TNF action	
PS	Disclosure; Fig 1(1-3); 51pp; German.	
PS	PNF-BP15 is one of 30 positives clones in a screened cDNA library	
CC	from induced TNF-induced fibrosarcoma cells. A TNF-BP had been	
CC	isolated from the urine of patients with uraemia and probes/primers	
CC	were constructed from the determined amino acid sequence.	
CC	to produce a vector expressing a soluble form of TNF-binding	
CC	protein, this plasmid was cut with XmnI, amplified by PCR and the	
CC	amplified DNA cut with BamHI and EcoRI.	
CC	The resulting 0.75 kb DNA fragment was inserted into pT7/alpha-19	
CC	(BRL) cut with the same enzymes to recover pTNF-BP. This was cut	
CC	with BamHI and EcoRI, and the recovered fragment inserted into	
CC	pMD-CMV1 (Q06283) to give the required plasmid pMDTNF-BP.	
CC	See also Q06282-Q06285.

PT New fusion protein tumour necrosis factor and human interleukin-1
PT receptor: useful in therapy, diagnosis and assays of e.g.
PT rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc.
PS Disclosure: Page 57-59; 85pp; English.

CC The sequences given in Q49931-32 encode human tumour necrosis factor
CC receptor (TNF-R) and the sequences in Q49933-34 encode human
CC interleukin-1 receptor (IL-1R). These sequences were used in the
CC production of a fusion protein which conformed to one of the
CC formulae:
CC TNF-R-linker-TNF-R-linker-IL-1R
CC IL-1R-linker-TNF-R
CC TNF-R-linker-TNF-R
CC The linker may comprise 5-100 amino acids selected from Gly, Asp,
CC Ser, Thr and Ala. These linkers separate the individual moieties
CC by such a distance that each component of the fusion protein is
CC capable of folding into the secondary or tertiary structure required
CC for its biological activity. These fusion proteins may be used in
CC therapy, diagnosis and assays for conditions mediated by TNF or IL-1,
CC particularly in conditions in which both TNF and IL-1 play a causative
CC role. They may be used to treat cachexia, rheumatoid arthritis,
CC diabetes, multiple sclerosis, pulmonary fibrosis and silicosis,
CC cerebral malaria, allograft and xenograft rejection in graft versus
CC host disease, sepsis, septic shock, inflammation, allergies and
CC autoimmune dysfunction.

FT	New polypeptide capable of binding human TNF alpha - comprises	
PT	first three cysteine-rich subdomains of TNF alpha receptor for	
PT	treating autoimmune disease, septic shock, HIV etc.	
PS	Claim 4: Fig 1: 43pp: English.	
CC	This sequence encodes human TNF-alpha 55KD receptor. A placenta cDNA	
CC	library in g110 was screened with probe Q29236. Ten hybridising clones	
CC	were plaque purified and cDNA size determined by PAGE against an	
CC	Eco RI digested phage DNA. The inserts of two cDNA clones were then	
CC	sequenced. The coding region of the majority of the human TNF-alpha	
CC	55KD receptor was isolated as an EcoRI fragment encoding 374 amino	
CC	acids, and cloned into a mammalian cell expression vector, resulting	
CC	in pTNFR. A derivative of the TNF-alpha receptor was produced by	
CC	engineering a termination codon just prior to the transmembrane	
CC	domain. PCR with primers Q29237/8 generated a 300bp	
CC	restriction fragment which was cloned into pTNFR, giving pTNFRcd.	
CC	DNA sequencing confirmed this contained the designed DNA sequence.	
CC	The TNF-alpha receptor expression plasmids were then transfected	
CC	into monkey Cos-7 cells.

 PT New protease capable of cleaving soluble tumour necrosis factor
 PT (TNF) receptor - from cell-bound TNF- receptor, useful for
 PT antaonising deleterious effects of TNF.
 PS Disclosure: Fig 1: 40pp; English.
 CC This sequence represents human p55 tumour necrosis factor (TNF-R) DNA.
 CC expression of this receptor is regulated by shedding of the extracellular
 CC receptor fragment. The p55 TNF-R can be shed in response to different
 CC inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell
 CC type. The only region of the receptor whose structure affects the
 CC shedding response is the spacer region (see R75012) in the extracellular
 CC domain. This region is located close to a site of cleavage of the
 CC molecule, and links the Cys rich module to the transmembrane domain. The
 CC spacer region of the encoded protein was used to create the chimera
 CC between human p55 TNF-R and murine epidermal growth factor receptor
 CC (EGF-R) that are represented by R75007-11. This spacer region was
 CC subjected to deletion mutations (R75013-25) and substitutions

CC (R75026-47): Of the spacer region, the most important residues are
 CC Asn 172, Val 173, Lys 174 and Gly 175, with Val 173 being the most
 CC important of these. The shedding of the receptor is independent of the
 CC side chain identity of these residues, with the exception of a limited
 CC dependence on the identity of Val 173. Mutations which alter the
 CC conformation of the protein adversely effect the shedding process. The
 CC mutations shown in R75013-47 were introduced in order to create an
 CC inhibitor of a protease that is capable of cleaving the soluble TNF-R
 CC from the cell bound TNF-R. Fragments of these inhibitors can be seen in
 CC R75017-9, R75023, R75033-5 and R75042-3. These protease inhibitors can
 CC be used for enhancing TNF function.

PT Modulating activity of tumour necrosis factor receptor - using
PT peptide(s), antibodies, etc. which interact with critical regions
PT of receptor or effector protein, for controlling auto-immune
PT disease, septic shock, etc.
PS Claim 2; Figure 1; 17pp; English.
CC Modification of the tumour necrosis factor receptor by mutation or
CC deletion modulates signal transduction and/or cleavage effected by
CC the receptor. This modulation of activity can also be achieved
CC using effector proteins which interact with the TNF receptor.
CC Molecules which interact with the TNF receptor or the effector
CC proteins can be used to treat or prevent diseases associated with
CC TNF activity e.g. autoimmune disease; Rheumatoid arthritis; graft
CC rejection; graft vs. host disease or septic shock. They can also
CC be used to treat overdoes of exogenous TNF.

PT Methods for altering fertility in mammals, esp. humans - e.g.
PT stimulating fertility by reducing the activity and/or levels of
PT circulating glyco:protein hormones having lutein activity
PT Example 12; Fig 6; 102PP; English.
CC Analogue 1 (human CG-beta(1-145)-linker-human CG-alpha(1-92)) is a
CC specific example of a single chain gonadotropin having a chorionic
CC gonadotropin (CG) beta-subunit at the N-terminus and a CG alpha-

```

```

CC subunit at the C-terminus, joined by a linker of 1-16 amino acids.
CC The analogue has luteinizing hormone (lutein) activity and is
CC useful for inducing ovulation and increasing male fertility.
CC The sequences coding for analogue 1 were cloned from a human
CC placental cDNA library using strand overlap extension PCR.

PT Methods for altering fertility in mammals, esp. humans - e.g.
PT stimulating fertility by reducing the activity and/or levels of
PT circulating glyco-protein hormones having luteotropin activity
PT Example 23; Fig 18; 102pp; English.
CC Analogue 1a (human CG-beta(1-145)-linker-human CG-alpha(1-92) [N53Q,
CC N78Q]) is a specific example of a single chain gonadotropin having
CC a chorionic gonadotropin (CG) beta-subunit at the N-terminus and a
CC CG alpha-subunit at the C-terminus, joined by a linker of 1-16 amino
CC acids. The analogue 1a was derived from analogue 1 by removing the
CC two glycosylation sites from the alpha-subunit. The analogue has
CC anti-luteinizing hormone (lutropin) activity and can be used for
CC facilitating ovulation, terminating pregnancy and reducing androgen
CC secretion. The present sequence codes for analogue 1a.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

SOURCE EST.
809weeks 2NDHP8CO9W vector-p173D (Pharmacia) with a modified
polylinker host-DH10B (ampicillin resistant) Rst1e1-Not I
Rst1e2-Eco RI two placentae: one from 8 weeks and another from 9
weeks post conception. 1st strand cdna was primed with a Not I -
Oligo(dT) primer

[5'-TGTTACCAATCTGACGTGAGCGCGCGGATTTTCTTTT-3']
double-stranded cdna was size selected, ligated to Eco RI adaptors
(Pharmacia), digested with Not I and cloned into the Not I and Eco
RI sites of a modified pT73 vector (Pharmacia). Library
constructed by Bento Soares and M. Fatima Bonaide.

human clone=257479 primer-m13 -40 forward library=Soares placenta
8to9weeks 2BHP8to9W vector=PT73D (Pharmacia) with a modified
polylinker host=DH10B (ampicillin resistant) Ks1tel=Not I
Ks1tel2=Eco RI two placentae: one from 8 weeks and another from 9
weeks post conception. 1st strand cDNA was primed with a Not I -
019G(dT) primer
[5'-TGTTACCACTGTAAGTGGAGCGCGGATTTTTTTTTTTTTTTT-3'],
double-stranded cDNA was size selected, ligated to Eco RI adapters
(Pharmacia), digested with Not I and cloned into the Not I and Eco
RI sites of a modified pT73 vector (Pharmacia). Library
constructed by Bento Soares and M. Fatima Bernaldo.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

PT Hybrid dimeric protein comprising two co-expressed units - each
based on receptor or ligand and a subunit of a heterodimeric

PT hormone, especially FSH, for inducing follicular maturation
PS Example: Pages 39-40; 60pp; English.

CC A novel fusion protein comprises 2 dimer forming co-expressed amino
acid sequences, each consisting of a homodimeric or heterodimeric

CC receptor chain or ligand, with ligand-receptor binding activity,
CC bound directly or via a peptide linker to a subunit of a

CC heterodimeric protein hormone capable of forming a heterodimer with
the hormone's other subunits. The fusion protein, e.g. the

CC thrombopoietin (TPO)/human chorionic gonadotrophin-beta subunit
CC (hCG-beta) fusion protein denoted by the present sequence,

CC significantly increases the biological activity of the hormone
CC component, reducing the requirement for hormone itself and the

CC number of injections needed.

 FT DNA encoding TNF binding protein and TNF-receptor - used in
 PT tumour treatment and to understand mechanism to TNF action
 PS disclosure; Fig 1(1-3); 51pp; German.
 CC Clone pTNF-BP15 was used to construct pADTNF-BP, for transfection of
 CC e.g. COS7 cells. The expressed proteins are useful
 CC prophylactically and therapeutically to control disorders which
 CC involve the damaging effects of TNF-alpha or -beta (e.g. infectious or
 CC parasitic diseases, shock, cachexia, autoimmune diseases, adult
 CC respiratory distress syndrome etc., or side effects of treatment with
 CC TNF-alpha). They can also be used as diagnostic reagents for
 CC assaying TNF and in study of TNF-receptor interactions.
 CC See also 006282-006285.

 DR New hybrid peptide(s) for binding cytokine(s) - comprising a
 PT malaria parasite peptide capable of binding a red blood cell and
 PT a receptor peptide.
 PS Example A: Page 53-54; 93pp; English.
 CC Hybrid peptides for binding cytokines, comprising a malaria parasite
 CC (Plasmodium falciparum) peptide (capable of binding to a red blood
 CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
 CC of these hybrid peptides. R70107 is a fusion of tumour necrosis factor
 CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)
 CC and glycophorin binding protein (GBP) 130. The use of cytokine
 CC receptors not normally found on RBCs means that the cytokine can bind
 CC harmlessly to the RBC without deleterious effect. The RBC protects the
 CC hybrid peptides from excretion from the kidney, and due to steric
 CC hindrance prevents the cytokines binding to a receptor in another cell.

CC GBP 130 or GBPH (GBP homologue) are the pref. malaria parasite peptides
 CC used, others include ERA 175 (175 kDa erythrocyte binding antigen),
 CC PMMA (pre major merozoite surface antigen) and the Duffy binding
 CC receptor molecule (eg. exhibited by Plasmodium vivax). These peptides
 CC bind to pref. glycophorin A, B and C, sialo glycoproteins, found on
 CC the surface of RBCs. The hybrid peptides are thus used to lower
 CC the levels of free cytokines in the circulation to reduce pathological
 CC damage.

 PT New polypeptide capable of binding human TNF alpha - comprises
 PT first three cysteine-rich subdomains of TNF alpha receptor for
 PT treating autoimmune disease, septic shock, HIV etc.
 PS Example: Fig 1; 43pp; English.
 CC This sequence was deduced from human TNF-alpha cDNA isolated as in
 CC Q24440. The first 35 amino acids are generally quite hydrophobic
 CC and probably represent a signal sequence. Residues 35-40 are highly
 CC charged (DNKR) and this is not normally found in secretory
 CC signal sequences. It is possible the receptor is processed by
 CC proteolysis after residue 40 which contains a dibasic cleavage site
 CC (KR). Hydropathy analysis of this sequence predicts a single
 CC transmembrane domain of 23 amino acids, dividing the sequence into
 CC an extracellular domain of 171 residues and a cytoplasmic domain of
 CC 221 residues. The sequence contains a large number of cysteine

CC residues, the arrangement of which is similar to that of other cell
 CC surface proteins, suggesting the TNF-alpha receptor is structurally
 CC related to a family of receptors.
 CC NOTE: - Residues 371,2 given in the sequence as T,L, are encoded by
 CC TGG (W) and AAG (K).

 PT New protease capable of cleaving soluble tumour necrosis factor
 PT (TNF) receptor from cell-bound TNF- receptor, useful for
 PT antagonising deleterious effects of TNF.
 PS Disclosure; Fig 1; 40pp; English.
 CC This sequence represents human p55 tumour necrosis factor (TNF-R).
 CC Expression of this receptor is regulated by shedding of the extracellular
 CC receptor fragment. The p55 TNF-R can be shed in response to different
 CC inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell
 CC type. The only region of the receptor whose structure affects the
 CC shedding response is the spacer region (see R75012) in the extracellular

CC domain. This region is located close to a site of cleavage of the
 CC molecule, and links the Cys rich module to the transmembrane domain. The
 CC spacer region of the encoded protein was used to create the chimeras
 CC between human p55 TNF-R and murine epidermal growth factor receptor
 CC (EGF-R) that are represented by R75007-11. This spacer region was
 CC subjected to deletion mutations (R75013-25) and substitutions
 CC (R75026-47). Of the spacer region, the most important residues are
 CC Asn 172, Val 173, Lys 174 and Gly 175, with Val 173 being the most
 CC important of these. The shedding of the receptor is independent of the
 CC side chain identity of these residues, with the exception of a limited
 CC dependence on the identity of Val 173. Mutations which alter the
 CC conformation of the protein adversely effect the shedding process.
 CC The mutations shown in R75013-47 were introduced in order to create an
 CC inhibitor of a protease that is capable of cleaving the soluble TNF-R
 CC from the cell bound TNF-R. Fragments of these inhibitors can be seen in
 CC R75017-9, R75025, R75033-5 and R75042-3. These protease inhibitors can
 SQ be used for enhancing TNF function.

 PT Insoluble tumour necrosis factor binding proteins - and DNA
 PT encoding them, useful in pharmaceutical prods. and for antibody
 PT prodn.
 PT Claim 1: Fig 1: 26pp: German.
 CC Partial amino acid sequences were determined for the 55 and 75kd
 CC TNF-BPs (see R11072-R11081) and oligonucleotide primers were
 CC synthesised based on these partial sequences. The primers were used
 CC to produce a cDNA fragment for use as a probe to screen a human
 CC placental cDNA bank constructed in lambda gtl1. Positive clones were
 CC identified and sequenced. DNA constructs comprising the TNF-BP coding
 CC sequence may also contain a fragment encoding a human Ig domain.
 CC Recombinant constructs are used to transform cells to confer
 CC improved TNF-binding properties.

 PT New hybrid peptide(s) for binding cytokine(s) - comprising a
 PT malaria parasite peptide capable of binding a red blood cell and
 PT a receptor peptide.
 PS Example A: Page 46-47; 93pp: English.
 CC Hybrid peptides for binding cytokines, comprising a malaria parasite
 CC (Plasmodium falciparum) peptide (capable of binding to a red blood
 CC cell (RBC)) and a receptor peptide are claimed. R70103-25 are examples
 CC of these hybrid peptides. R70103 is a fusion of tumour necrosis factor
 CC receptor (in accordance with H Loetscher et al Cell, Vol. 61, 351-359)
 CC and glycophorin binding protein (GBP) 130. The use of cytokine
 CC receptors not normally found on RBCs means that the cytokine can bind
 CC harmlessly to the RBC without deleterious effect. The RBC protects the
 CC hybrid peptides from excretion from the kidney, and due to steric
 CC hindrance prevents the cytokines binding to a receptor in another cell.
 CC GBP 130 or GBPH (GBP homologue) are the pred. malaria parasite peptides
 CC used, others include EBA 175 (175 kDa erythrocyte binding antigen),
 CC PMMSA (pre major merozoite surface antigen) and the Duffy binding
 CC receptor molecule (eg. exhibited by Plasmodium vivax). These peptides
 CC bind to pref. glycophorin A, B and C, sialo glycoproteins, found on
 CC the surface of RBCs. The hybrid peptides are thus used to lower
 CC the levels of free cytokines in the circulation to reduce pathological
 CC damage.

MParch_dp protein - protein database search, using Smith-Waterman algorithm
 Run on: Wed May 6 09:03:29 1998; Maspar time 9.80 Seconds
 Tabular output not generated. 859.610 Million cell updates/sec

Title: >US-08-804-166-8
 Description: (1-336) from US08804166.pep
 Perfect Score: 2541
 Sequence: 1 SRTSLLLAFGLCLPWLQEG.....PSLPSPSRUPGSDPIPLPQ 336

Scoring table: PAM 150
 Gap 11

Searched: 69112 seqs, 25083644 residues

Post-processing: Minimum Match 0%
 Listing first 45 summaries

Database: swiss-prot35
 1:swiss1

Statistics: Mean 44.259; Variance 72.852; scale 0.608

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 CC -1- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
 CC RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
 CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
 CC PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE
 CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
 CC PROTEASES) MEDIATING APOPTOSIS.
 CC -1- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFR1 LEADS TO
 CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS
 CC PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
 CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
 CC PROTEINS SUCH AS TRAFs, RIP AND POSSIBLY FADD, ARE RECRUITED TO
 CC TNFR1 COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
 CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
 CC NF-KAPPA B SIGNALING.
 CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
 CC -1- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.

CC -1- FUNCTION: RECEPTOR FOR TNF-ALPHA. THE ADAPTOR MOLECULE FADD
CC RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING
CC AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC)
CC PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATING WHICH INITIATES THE
CC SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE
CC PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).
CC -1- SUBUNIT: TNF BINDING TO THE EXTRACELLULAR DOMAIN OF TNFRI LEADS TO
CC HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS

CC PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY
CC WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING
CC PROTEINS SUCH AS TRAF6, RIP AND POSSIBLY FADD, ARE RECRUITED TO
CC TNFRI COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX
CC ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
CC NF-KAPPA B SIGNALING (BY SIMILARITY).
CC -1- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
CC -1- SIMILARITY: CONTAINS A LA-NGFR/TNFR-TYPE CYSTEINE-RICH REGION.
